

SP PRO Factory Locked Grid Export Power limit Certificate

This is to certify that the Selectronic SP PRO inverter (details of which are contained in the affixed label) has been factory fitted with an option that locks the limit of the total maximum power that can be exported to the grid from any connected renewable energy sources.

This certificate is only valid when an official Selectronic Serial Number label has been affixed below. The label specifies the following details about the SP PRO and the value of its Factory Set Export limit:

1. SP PRO Serial number,
2. SP PRO Model number
3. Value of the Factory Set Export limit. This value is specified by the "Installed Option" Code in the bottom RH corner of the label. The code format is EXn.n where n.n is the Factory Set Export limit in kW (Example: EX5.0 means the SP PRO has been fitted with a Factory Set Export limit of 5.0kW).
